Latihan

- Tambahkan kondisi, dimana untuk login selain menggunakan username juga bisa dengan email
- Terapkan konsep **Retrieve/Read** pada **register** dimana jika di database sudah ada data username / email maka pada proses register (membuat akun baru) akan muncul keterangan error yang menyatakan bahwa username/email sudah **terdaftar**.
- Dengan konsep Retrieve/Read, gunakan untuk menampilkan semua data yang ada di table akun dengan menggunakan **foreach**.

NEXT

- **Update dan Delete**
